

MY CAMPUS

Personalized Learning for Every Student

A mastery-based adaptive learning platform that understands what a student knows, how they learn best, and when human support is needed.

PROBLEM STATEMENT

Traditional digital learning gives every student the same content, difficulty and sequence. It does not reliably identify what the learner already knows, the exact weak concept, the learning format that works best, or when human intervention is needed.

OUR PROPOSED SOLUTION

MY CAMPUS diagnoses mastery, adapts the learning mode across Notes → Video → 3D → Game → AI, verifies understanding, and escalates unresolved gaps to faculty with context—while HODs track support workload, closures and response time.

1

DIAGNOSE

Level & weak concept

2

ADAPT

Best learning mode

3

VERIFY

Mastery before progress

4

SUPPORT

AI → Faculty → HOD

STUDENT • PROFESSOR • HOD

The Problem: One Classroom, Many Learning Needs

Traditional digital learning usually delivers the same content, difficulty and sequence to every student.

A single student can be...

- A** **Already advanced**
Forced to repeat basics
- B** **Struggling with one concept**
Gets the same explanation again
- C** **Visual learner**
Receives only notes
- D** **Still confused**
No structured escalation path

What the platform must understand

- 01** **What does the student already know?**
Mastery-based placement, not assumptions.
- 02** **Which concept is actually weak?**
Detect the exact gap behind wrong answers.
- 03** **How does this student learn best?**
Adapt between notes, video, 3D and games.
- 04** **When should a human intervene?**
Escalate unresolved learning gaps with context.

CORE GAP: LEARNING IS NOT PERSONALIZED

Our Solution: A Mastery-Based Adaptive Learning Engine

The platform continuously personalizes level, content format, support and progression for each learner.

Student Journey: Test → Learn → Adapt → Escalate

The student never gets trapped in a fixed sequence; the system adapts at every step.

Faculty & HOD Portal: Human Support Becomes Measurable

Every escalation carries learning context, so professors solve the right problem faster—and HODs can monitor support quality.

PROFESSOR

Smart Doubt Ticket

When AI support is not enough, the system sends a structured ticket—not a vague “I don’t understand” message.

Student	Abhi
Subject	Data Structures
Topic	Recursion
Exact gap	Base condition
Attempts	Notes → Video → 3D → AI

HOD

Department Support Analytics

HOD sees workload and response quality across faculty, subjects and recurring student pain points.

Faculty	Tickets	Solved	Pending	Avg. Time
Prof A	34	31	3	18 min
Prof B	22	15	7	1h 12m

TICKET TRACKING

RESPONSE TIME

Why MY CAMPUS Stands Out

One closed-loop system connects mastery, multimodal learning, AI support and faculty accountability.

“The system learns the learner.”

Not just what they scored—but what they know, where they struggle, and which learning method actually works for them.

01

Mastery before progression

Higher levels unlock only when demonstrated knowledge is strong.

02

Personalized content order

Notes, video, 3D and games are reordered from real learner behavior.

03

AI with contextual escalation

AI gets the learning context first; faculty receives the exact unresolved gap.

04

Faculty accountability loop

Professors resolve tickets; HOD tracks workload, closures and response time.

Expected outcome

Faster gap detection • Better student engagement • More effective faculty intervention • Transparent department support
